DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 15, 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Losser et al. (6,813,480).

Losser et al. (Fig. 1) disclose an amplifier circuit comprising: a differential amplifier (102) comprises two transistors which can be read as a first and second amplifier element connected to first and second input signals (126, 128) respectively of different frequencies; a power supply terminal (ground); a common power supply path having one end connected to the ground and another end to a node; and inductors

connected between emitters of transistors in differential amplifier (102) can be read as first and second individual power supplies, respectively having the connections thereof.

Regarding claims 15, 16, only specifies intended uses of the invention which are not given any patentable weight as they do not materially effect to the final product claimed, wherein the reference circuit is implemented in a radio communication device.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 5, 7, 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Losser et al.

Application/Control Number: 10/807,244

Art Unit: 2817

Regarding claims 5, 13, Losser et al. disclose the claimed invention except first and second individual power supply having different lengths. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have changed the size of the inductor to obtain a desired result. A change in size is generally recognized as being within the level of ordinary skill in the art.

Regarding claim 7, Losser et al. disclose the claimed invention except output matching circuits for each amplifier element. However, it is well known in the art that output matching circuit is commonly added to the output of the amplifier to provide matching impedance on the output. As such, adding an output matching circuit to the reference circuit would have been obvious to one having ordinary skill in the art.

Allowable Subject Matter

Claims 2-4, 6, 8-12, 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 2-4, 10-12 call for, among others, first and second layers having the functions thereof.

Claims 6, 14 call, for, among others, wherein each power supply path comprises an inductance element.

Claim 8, 9 call for, among others, a real part and a conjugate impedance of the matching circuit.

Application/Control Number: 10/807,244 Page 5

Art Unit: 2817

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Fujioka et al. (6,965,399); Winslow (6,118,343); Adar (5,774,017)) show further analogous prior art circuitry having multi-frequency bands.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh V. Nguyen whose telephone number is (571) 272-1767. The examiner can normally be reached from 8:00 AM - 3:30 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on (571) 272-1769. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 872-9306 for After Final communications.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
